Re: IAPMO - WATER EFFICIENCY & SANITATION STANDARD

Dear Mr. Granger:

I am writing to inform you that we have received your negative ballot for Item #132 PC1B based on the 2023 Water Efficiency and Sanitation Standard Report on Comments.

In accordance with the *IAPMO Regulations Governing Consensus Development of the Water Efficiency and Sanitation Standard*, Section 5.6(a), your negative vote for Item #132 PC1B is considered resolved. I have attached the final letter ballot for your review.

As indicated by the letter ballot, Item #132 PC1B failed to achieve the necessary 67% affirmative of returned ballots. In addition, the negative vote and comment was re-circulated to the TC in order to provide an opportunity to reaffirm, respond or change their vote before the closing date of the ballot.

**Item #132 PC1B did not achieve the necessary 67% affirmative vote of returned ballots (received 15 affirmative).**

28 Members eligible to vote – 4 not returned – 1 abstention =  $23 \times \frac{2}{3} = 16$  affirmatives required.

Please note you have the right to appeal such action or inaction in accordance with Section 9.1 of the *IAPMO Regulations Governing Consensus Development of the Water Efficiency and Sanitation Standard*. If you have any questions, please do not hesitate to contact me at your earliest convenience.

Thank you for your continued support of the development of the 2023 Water Efficiency and Sanitation Standard.

Sincerely,

A handwritten signature in black ink, appearing to be "H. Aguilar", written in a cursive style.

Hugo Aguilar, P.E.  
Secretary, Executive Committee

## 2023 WE•Stand Comments

Ballot Name:	Item #132 Comment 1B	
Voter Name	Vote	Comments
White, Charles	NEGATIVE W/COMMENT	<p>As proposed, this violates several things in the UPC. First, the piping depicted is part of the DWV system by virtue of the permanently installed nature of the piping intended to handle discharge from an appliance. UPC Section 805.1 prohibits discharges under pressure (low or high does not matter) from being directly connected to a part of the drainage system.</p> <p>Perhaps the path through the diverter valve to the stand pipe could qualify as an extension of the clothes washer drain as it is short and discharges to an indirect waste but the path to the alternate disposal method through the diverter (which is not shown but easily could dump on the ground) does not discharge indirectly. In proponent's previously submitted drawings, this discharge is rigidly connected to alternate disposal methods. UPC Section 803.3 does not require a vent on an indirect waste line but if one is installed, it must NOT connect to a sewer connected vent, it must vent separately to the outdoor air, the UPC is silent on the use of an air admittance valve.</p> <p>A vacuum relief valve is a device used for water distribution devices, not drainage. It is also unclear if the manufacturers of clothes washers are aware of the additional back pressure from the additional piping, fittings, diverter valves, and termination field. The diverter valve should choose between two proper indirect waste receptors.</p>
